Materials Purchase Request

Requestor Information:			PO NUMBER:	
TEAM #/Lead: M9			Team Lead Email: lrobinson152@liberty.edu	
	<i>last name</i> Robinson	<i>first name</i> Landin	Date:	11/5/2025
Requestor Name:	Nathan Bruckner			ORDER TOTAL: \$59.05
Utilization:	☒ Consumable	☐ Equipment/Tools		
Item Description: (provide detail and links on separate page)				
Microcontroller, display, stepdown DC-DC converter, switching transistors, and a serial breakout module.				
Justification: (briefly explain why it is needed and how it will be used)				
The microcontroller is the brain of the project, and without it, there will be no measurement capability, and automation would be impossible. The display is necessary to show the measurement. The stepdown DC-DC converter is necessary to step down the battery voltage. The switching MOSFETS will be used to toggle the actuator. The serial breakout module will be used to drive the LCD display.
